

## USER STORIES

### 1. Sign Up (5 Story points)

As a new user, I want to register an account on the platform so that I can access the features available to me.

UAT 1:

Given: a new user clicks "Sign up with Google" and completes the Google flow When: they land on the role selection page and select Student or Vendor Then: their account is created with the chosen role and they are redirected to their dashboard

UAT 2:

Given: a new user clicks "Sign up with Google" and completes the Google flow When: they select Admin on the role page and enter the correct admin code Then: their account is created with the Admin role and they are redirected to the admin dashboard

UAT 3:

Given: a new user completes the Google flow and selects Admin on the role page When: they enter an incorrect admin code and click Continue Then: they are shown an error message, and their account is not created

UAT 4:

Given: a user who already has an account attempt to sign up again with the same Google account When: they complete the Google flow Then: no duplicate account is created, and they are logged in to their existing account

UAT 5:

Given: a new user clicks "Sign up with Google" When: they cancel the popup or deny app permissions Then: they are returned to the sign-up page and no account is created

### 2. Sign in (3 Story points)

As a registered user, I want to sign in with Google so that I can access my dashboard without filling in any details again

UAT 1:

Given I am a registered user with role "student" and my authId exists in MongoDB with isActive: true, When I click "Sign in with Google" and complete the Google popup, Then I am redirected directly to the student dashboard without seeing the role picker.

UAT 2:

Given I am a registered and approved vendor with role "vendor" and my authId exists in MongoDB with isActive: true, When I click "Sign in with Google" and complete the Google popup, Then I am redirected directly to the vendor dashboard showing my shop and incoming orders.

UAT 3:

Given I am a registered user with role "admin" and my authId exists in MongoDB with isActive: true, When I click "Sign in with Google" and complete the Google popup, Then I am redirected directly to the admin dashboard showing vendor management and platform controls, without seeing the role picker.

UAT 4:

Given I am a registered user who has successfully logged in and is on my dashboard, When I refresh the page, Then I remain on my dashboard and am not redirected back to the login page, my session is preserved

### **3. Vendor Menu Creation (8 Story points)**

As a vendor, I want to create a new menu for my restaurant so that customers can view and order from it.

UAT 1:

Given I am logged in as a vendor When I click "Add item" and fill in the name, description, price, category and photo Then the item should appear on my menu grid and be saved in the database

UAT 2:

Given I am logged in as a vendor When I try to add a menu item with the same name as an existing one Then I should see an error message and the duplicate should not be saved

UAT 3:

Given I am logged in as a vendor When my dashboard loads Then I should see all my menu items fetched from the database

UAT 4:

Given I am logged in as a vendor When I click "Edit" on a menu item, change any field and click "Save changes" Then the updated details should reflect on the grid and in the database

UAT 5:

Given I am logged in as a vendor When I click "Delete" on a menu item and confirm Then the item should be removed from the grid and from the database

### **4. Student Browsing (5 Story points)**

As a student, I want to browse available food menus on the platform, so that I can discover what vendors are offering and make informed ordering decisions.

UAT 1:

Given: I am a logged-in student and at least one vendor has a published menu When: I navigate to the Browse Menus section Then: all published menus should be displayed with the vendor name and menu description visible

UAT 2:

Given: I am a logged-in student and I can see a list of published menus When: I click on a specific menu Then: I should be taken to that menu's detail page showing all its items, including item names, descriptions, and prices

### **5. Admin(3 Story points)**

As an admin, the ability to view all registered users is needed, so that platform activity can be monitored and managed.

UAT1:

Given the admin is logged in When the admin navigates to the user management section Then a list of all registered users should be displayed along with their details

UAT2:

Given the admin is logged in When the admin navigates to the user management section Then an empty state message should be displayed indicating that there are no registered users.

UAT3:

Given the admin is logged in And the admin is on the user management section When a search is performed using a registered user's name or email Then the matching user's details should be displayed in the results

UAT4:

Given the admin is logged in When the admin navigates to the user management section Then each user entry should display the correct details such as name, email, and registration date

## TASKS

1. Implementation of 3<sup>rd</sup> user party to sign up and sign in
2. Implement the sign in page
3. Implement the role selection page
4. Implement three dashboards: student, vendor, admin
5. Implement the database schema
6. Create APIs to connect the dashboards to the database
7. Implement Azure deployment
